

IMET M550 WAVE 'S'

The pushbutton radio M550 WAVE 'S' range is available with either 4, 6 or 8 double pressure pushbuttons for the movement commands in addition to the standard Start/Klaxon button and STOP mushroom head button. The transmitter has space for an optional command which can be a multi position rotary switch, a single step pushbutton or an analogue potentiometer. IMET have paid special attention to the ergonomic design of the WAVE transmitter bearing in mind the practical aspects of compact overall size, large pushbuttons suitable for operation with industrial gloves, easy access & protected STOP button. This makes the WAVE 'S' a natural choice for the control of hoists, overhead cranes and small tower cranes. The possibility of customisation again extends the possible uses of this type of transmitter to a large variety of machines equipped with on/off control boxes whether AC or DC powered.
