

IMET M550 WAVE 'L'

The pushbutton radio M550 WAVE 'L' range is available with either 10 or 12 double pressure pushbuttons for the movement commands in addition to the standard Start/Klaxon button. The model M550D WAVE 'L10' can be equipped with a 8+8 digit LCD screen for displaying machine status information using the data feedback option. As with the WAVE 'S' the transmitter has space for an optional command which can be a multi position rotary switch, a single step pushbutton or an analogue potentiometer. This makes the WAVE 'L' a natural choice for the control of overhead cranes equipped with additional functions such as auxiliary hoists, grabs, magnets, etc. and medium size tower cranes. The possibility of customisation again extends the possible uses of this type of transmitter to a large variety of machines equipped with on/off control boxes whether AC or DC powered.
