

IMET M550 THOR 'B4'

The THOR B4 transmitter is similar to the B3 but with the addition of a fourth, double-axis joystick. This makes it an ideal system for complex and high integrity factory cranes, 7-8 function hydraulic cranes, crawler cranes and other special machines. In addition to the 4 double-axis joysticks, the THOR console has space available for several on/off and proportional commands making it easy to customise for complex AC and DC powered applications.

Dimensions
