

# IMET M550 ZEUS 'B2'

The ZEUS B2 transmitter combines the advanced ergonomic design and functional features required in standard application fields such as tower cranes, factory cranes, small concrete pumps, high pressure and vacuum pump vehicles and any other type of machine for which double-axis joysticks represent the ideal type of movement commands.

The ZEUS B2 console has a compact size but reserves ample space for on/off and proportional commands making it easy to customise the transmitter for special applications.

## Dimensions

212 x 133 x 147 mm

212 x 169 x 147 mm
